Roll No.

TCS-402

**B. TECH. (FOURTH SEMESTER)
MID SEMESTER EXAMINATION,
April/May, 2022**

**FINITE AUTOMATA AND FORMAL
LANGUAGE**

Time : 1½ Hours

Maximum Marks : 50

Note : (i) Answer all the questions by choosing any *one* of the sub-questions.

(ii) Each question carries 10 marks.

1. (a) (i) Construct a DFA recognizing the following language (or strings) : $\{a^n b^m | n \text{ is divisible by 3 and } m \text{ is divisible by 2 or } n - m \geq 1\}$.

10 Marks (CO1)

- (ii) Find a DFA machine that accepts the language which has either odd

P. T. O.

(2)

TCS-402

number of 0's or even number of 1's
but not both together over alphabet
 $\Sigma = \{0,1\}$.

OR

- (b) Construct a minimum state automaton equivalent to the finite automaton given in the following table :

| State | Input $[\Sigma] \rightarrow$ | |
|-------------------|------------------------------|----|
| | a | b |
| $\rightarrow q_0$ | q0 | q3 |
| q1 | q2 | q5 |
| q2 | q3 | q4 |
| q3 | q0 | q5 |
| q4 | q0 | q6 |
| q5 | q1 | q4 |
| (q6) | q1 | q3 |

10 Marks (CO1)

2. (a) Write short notes on the following :

10 Marks (CO1)

- (i) Kleene Closures
- (ii) Generalized Transition Graph
- (iii) Applications and Limitations of FA

(3)

TCS-402

OR

- (b) Discuss the finite state machine with the help of an appropriate example.

10 Marks (CO1)

3. (a) Explain CHOMSKY classification of languages with example. 10 Marks (CO1)

OR

- (b) Design DFA for a Language of string 0 and 1 that :

10 Marks (CO1)

- (i) ending with 10
- (ii) ending with 11
- (iii) ending with 1

4. (a) State Arden's theorem. Consider a DFA machine, $M = (\{q_1, q_2, q_3\}, \{0, 1\}, \delta, q_1, \{q_1\})$, where the transition function is defined as following :

$$\begin{aligned} \delta(q_1, 0) &= q_1, & \delta(q_1, 1) &= q_2, \\ \delta(q_2, 0) &= q_3, & \delta(q_2, 1) &= q_2, \\ \delta(q_3, 0) &= q_1, & \delta(q_3, 1) &= q_2 \end{aligned}$$

Find a regular expression 'r' such that

$$L(r) = L(M). \quad 10 \text{ Marks (CO2)}$$

P. T. O.

OR

- (b) Write the statement of Pumping Lemma for regular languages. Show that $L = \{ a^n : n \geq 2, \text{ is a prime number} \}$ is not a regular language over $\Sigma = \{a\}$.

10 Marks (CO2)

5. (a) Consider the Mealy machine described by the transition table given in table. Construct a Moore machine which is equivalent to the Mealy machine. 10 Marks (CO2)

| P. State | Input a = 0 | | Input a = 1 |
|----------|-------------|--------|-------------|
| | State | Output | State |
| q1 | q3 | 0 | q2 |
| q2 | q1 | 1 | q4 |
| q3 | q2 | 1 | q1 |
| q4 | q4 | 1 | q3 |

OR

- (b) Draw the NFA for the regular expression $(a|b)^* a b b$ with ϵ move. Convert this NFA to DFA using ϵ closure method.

10 Marks (CO2)
